Dear Ma, Pa.

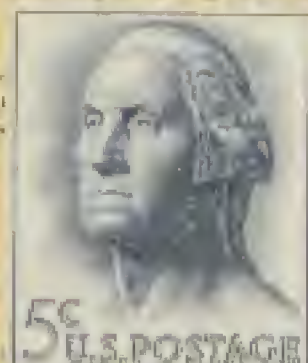

Certainly was a sad and terrible thing about the President. The Bethel exit (Rt. 501) from Rt. 22 is clearly marked. Drive carefully. Of course Ken is invited! We are looking forward to your visit much. Much love, Mike

**BULLOCK'S ORIOLE**

(Icterus bullocki)

This is the common Oriole or "Fire Bird" of much of the West, and it may be distinguished from other American Orioles by the black crown and large white wing patches.

The nest is a cup-like affair, hanging from the tips of the branches, from 8 to 40 feet from the ground, generally in

cotton woods or willows. The three to six eggs are bluish white or pale buff, lined and speckled with blackish. If you put out a supply of string, yarn or floss, and cut it into ten inch lengths, Orioles will sometimes use it for nest-building.

In the summertime, this species ranges as far north as southern British Columbia and southern Saskatchewan. It winters in Mexico.

Will be glad to go to  
Craig party & will  
try to be home before  
6:30 Friday.  
Love! H.M. Dingley.

Dear Pop,

Thanks for your  
interesting letter (which  
I have obediently forwarded).  
That 5-shell record is impressive  
and I believe unbeatable, but  
I bet the mileage record is  
not unbeatable. Impressive,  
though, also. How can you  
go hunting the 24th if you  
will be here then??

Love to Mumsie and you,  
Mike

### FIRE ISLAND LIGHTHOUSE

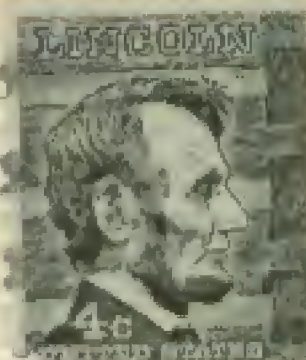

This lighthouse, the first to be sighted by ships coming from Europe, is located on Fire Island and can be reached by ferry from Babylon or Bay Shore. Fire Island was a sand bar in 1787 and called Seal Island by the Indians because it once was inhabited by seals. Early formation consisted of five islands which uniting became known as Fire Island.

We got a nice note from
